

Year 2 activities to do this week for Topic

Science

In Science this week we were going to find out about food chains.

Some living things create energy, they are called PRODUCERS and some use the energy, they are called CONSUMERS.

Plants are PRODUCERS of energy, as they make their own food using SUNLIGHT, AIR, WATER and SOIL.

Animals are CONSUMERS because they eat other animals and plants.

Watch this video to help you understand the food chain.

So sunlight is first, followed by plants, then creatures that eat plants, then animals that eat animals!

For your work this week I would like you to create a food chain in your book, draw pictures of each thing in the food chain and then add labels. For a challenge, write some sentences about food chains using the key words producers and consumers.

Art

To finish our topic Paws, Claws and Whiskers, I would like you to draw or paint a picture of your favourite animal. BUT it must be a real animal!
