

Year 2 Science

Week commencing Monday 27th April 2020.

This week's science question is What are the uses of wood?

I would like you to have a walk around your home to see how many things you can find that are made from wood and think about why wood was used to make this item.

See if you can answer these questions.

1. Is wood strong?
2. Is wood heavy?
3. Is wood a good material for school shoes? Why/why not?

Now can you use the information you have about wood to draw a poster for a timber company, they sell wood, telling people what wood is good for and draw some examples of how wood could be used, what you could make with it and what is good about wood.
