

Year 2 Science

Week commencing Monday 4th May 2020.

This week's science question is What are the uses for plastic?

I would like you to have a walk around your home to see how many things you can find that are made from plastic this week and think about why plastic was used to make this item. See how many things in the kitchen cupboards and fridge are made from plastic. Could you have used wood to make these things?

When you find something made from plastic, see if you can squeeze it or change its shape.

Once you have found some items, put them into the order from squeeziest to hardest, what do you notice about the different items? Do you think that all plastics are the same?

Draw your objects in order and add a label to tell me what you have drawn.

Challenge:

Can you remember what we found out about plastic pollution before we broke up?
